with Visual Supply Chain Solutions

## Improve Labor Production Metrics with Visual Supply Chain Solutions

In today's competitive distribution environments, distribution center managers, quality control officers and distribution employees require greater visibility about performance to keep pace with demand flow and service commitments. Reports about yesterday or even this morning's performance are often useless when it comes to being able to efficiently adapt and adjust. Labor Productivity Improvement solution is a complete package of software, hardware, business applications and services that provides the real-time information critical for frontline managers and staff to ensure improved labor productivity and reduced operational costs.

### Challenge

Improve distribution labor efficiencies and increase the rate of information flow related to critical labor processes.

### Solution

Leverage Korbyt to collect, transform and display labor performance data into impactful graphics on LED displays, desktops and mobile devices in real time.

### Result

Increased labor productivity and reduced costs as a result of better information flow and real-time performance alerts.

# Labor Productivity Improvement

Conveniently located displays allow shop floor managers and employees to easily view key metrics related to optimizing labor production.

## The Korbyt Solution

The strength of Korbyt's Labor Productivity Improvement solution is the ability to aggregate multiple data sources in a secure way and manipulate that data into coherent, useful and impactful visual information that is displayed in real time. This functionality allows large distribution or fulfillment operations to drive costs down and improve the productivity of their production lines.

Distribution operations managers utilize Korbyt's solutions to increase their labor productivity rates by improving the real-time visualization of key labor performance metrics including units picked, inducted and packed.

Capable of interfacing with multiple data sources including warehouse management systems, machine PLCs and ERP platforms, Korbyt's powerful software takes critical shop floor data and makes it visible on high definition LED displays and desktop dashboards. This visibility gives managers complete real-time awareness of current production statistics, with threshold alerts for data that falls out of range.

Why wait on yesterday's report to tell you how your business is performing? Get your key labor production metrics in real time - when and where it matters the most - with Korbyt's visual communications solutions.

## Features and Benefits

- Real-time data display for labor performance metrics and company information
- Integrates with a wide variety of warehousing and distribution systems
- Assembles and configures disparate data into impactful visual dashboards
- Communicates company messaging efficiently and consistently to employees
- Provides visibility to key performance metrics related to labor efficiency including units picked, inducted and packed
- Convenient and easy-to-read dashboards on LED displays, desktops and mobile devices
- Configurable threshold alerts on machine status and key efficiency metrics
- Secure and scalable enterprise architecture
